

Your Divers Are Safer With a **SHARC**™ in the Water.

INTRODUCING

SHARCSM

SUBSEA HYDRAULIC ABRASIVE ROTATING CUTTER

SHARC is a game-changing innovation in subsea P&A cutting that's safer and more efficient than other existing methods.

Developed by Chet Morrison Contractors, SHARC virtually eliminates the need for high-power jetting and explosives—**and reduces overall job time by 60%.**

“The Chet Morrison P&A, dive and marine crew did outstanding work. Using this new cutting tool, they completed four wells for us at about half of the expected cost. CMC saved ERT and partners many millions of dollars.”

—**ROD HEBERT**, Helix ERT

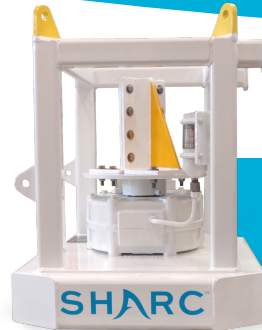

Contact Engineering Manager Ryan Vestal to find out how Chet Morrison's new SHARC can take a bite out of your P&A project's costs and safety risks.

Phone: **(985) 850-1224**

SHARC is safer for divers and the environment, and better for your bottom line.

- Safer for divers:** internal cutting eliminates the need for working in holes
- More efficient and cost effective** than other methods
- Can be ROV or diver deployed**, then surface controlled and monitored
- Makes clean, even cuts on pipes 2" and larger**
- Can handle walls up to 3" thick** with multiple grouted strings
- Cuts any size caisson or jacket leg** from surface or subsea
- Works with diving support vessels** in water depths up to 1000'
- Friendlier** for subsea environment and marine life

Chet Morrison
CONTRACTORS

a Morrison Energy Group company

Land Construction • Marine Construction • Well Services

Chet Morrison Contractors, L.L.C. (CMC), celebrating 30 years in business, provides the energy sector with solutions in the form of construction, inspection, maintenance, repair and decommissioning services.
